

Drive Quality Performance With Real-Time Care Gap Closure Across Your Network

Timely insights in your workflow deliver measurable results, empowering providers to act fast and improve outcomes across your plan

Transitions of care are high-stakes, pivotal moments in a member's care journey, yet most health plan-provider networks are operating on **lagged claims data and outdated workflows**, making it difficult to meet today's HEDIS and CMS Star Ratings expectations.

Bamboo Health's Care Gaps Solution changes the approach, surfacing open care gaps in real time and empowering providers with the workflows, alerts and context needed to streamline care.

Act in Real-Time or Risk Falling Behind

- **Delayed acute event notifications** make timely follow-up nearly impossible
- **Providers lack real-time alerts** and insights to close care gaps within their workflows
- **Claims data lags** hinder performance monitoring and improvement in real time

Improve Quality Measures and Member Outcomes:

- **Real-Time Gap Detection:** Surfaces open gaps in care to network providers using Bamboo Health's national Pings™ network
- **Embedded Insights and Workflows:** Provides detailed best practices and workflows to make closing gaps easier at the point of care
- **Seamless Performance Monitoring and Collaboration:** Delivers real-time analytics to improve quality measure tracking and enable stronger health plan-provider collaboration
- **Optimized post-discharge transitions and follow-ups:** Provides streamlined insights, leading to an 8.2% improvement in care transitions for one client
- **Engaged, Interconnected Network:** Act quickly and easily to close transitions of care and follow-up on care gaps by leveraging Bamboo Health's nationwide admission, discharge and transfer network
